

# MONITORING RELAY - VOLTAGE, SPECIAL

## 1-phase

AC

**HRN-33**

Supply and monitored voltage in range AC 48-276 V, 1x output for Umax and Umin adjustable level.  
page 90

**HRN-35**

As HRN-33 but individual output for each level (Umax/Umin). Adjustable time delay to eliminate voltage peaks.  
page 90

**HRN-37**

As HRN-33, but in voltage range AC 24-150 V.  
page 90

**HRN-63**

Supply and monitored voltage in range AC 48-276 V, 1x output for Umax and Umin adjustable level.  
page 90

**HRN-67**

as HRN-63, but in voltage range AC 24-150 V.  
page 90

DC

**HRN-34**

as HRN-33 but in voltage range DC 6-30 V for monitoring battery circuits (6, 12, 24 V).  
page 90

**HRN-64**

as HRN-63 but in voltage range DC 6-30 V for monitoring battery circuits (6, 12, 24 V).  
page 90

AC/DC

**HRN-41**

(Hysteresis) monitoring DC and AC voltage 10-500 V, divided into 3 inputs and 3 ranges, 2 independent outputs 16 A, 2x time delay.  
page 92

**HRN-42**

(Window) as HRN-41 but function WINDOW. Other functions (applicable for HRN-41): faulty state memory, hysteresis, galv. separated supply.  
page 92

## 3-phase

**HRN-55**

Supply from all phases.  
page 94

**HRN-55N**

Supply L1-N (monitors also disconnection of neutral wire). Time delay to eliminate peaks.  
page 94

**HRN-57**

Supply from all phases.  
page 95

**HRN-57N**

Supply L1-N (monitors also neutral wire disconnection). Adjustable voltage level.  
page 95

**HRN-54**

Supply from all phases.  
page 96

**HRN-54N**

Supply L1-N (monitors also disconnection of neutral wire). All parameters adjustable by potentiometers.  
page 96

**HRN-56/208**  
Adjustable level Umin.  
page 97**HRN-56/240**  
Adjustable level Umin.  
page 97**HRN-56/400**  
Adjustable level Umin.  
page 97**HRN-56/480**  
Adjustable level Umin.  
page 97**HRN-56/575**  
Adjustable level Umin.  
page 97**HRN-43**

Galvanically separated supply AC 230 V, AC 400 or AC/DC 24 V, memory, adjustable hysteresis and delay, 2 x independent output.  
page 98

**HRN-43N**

Galvanically separated supply AC 230 V, AC 400 or AC/DC 24 V, memory, adjustable hysteresis and delay, 2 x independent output.  
page 98

**HRN-100**

Possibility of 3/4-wire connection, allows monitoring lower and upper level voltage and frequency. Optional also monitors outages, order, phase asymmetry incl. failure of neutral  
page 100

## Optical signaling

**MPS-1**

Optical signaling of 3-phase network.  
page 103

## Power factor

**COS-2**

monitors and scores power factor (phase shift between current and voltage  $\cos \varphi$ ) in 3-phase/1-phase circuits (motors, pumps etc.).  
page 104

## Frequency

**HRF-10**

for monitoring the frequency of AC voltage. The monitored frequency 50/60/400 Hz is selected by a switch.  
page 106

- It serves to control supply voltage for appliances sensitive to supply tolerance, protection of the device against under/over voltage.
- HRN-3x is band voltage relay, HRN-6x is over/under voltage relay. For difference - see graph of function.
- HRN-33, HRN-63**
  - monitors voltage in range AC 48 - 276 V
  - Umax and Umin can be monitored independently.
- HRN-34, HRN-64**
  - like HRN-33, but voltage range is DC 6 - 30 V
  - monitoring of battery circuits (24 V).
- HRN-35**
  - like HRN-33, but independent output relays for each voltage level
  - switching of other loads possible.
- HRN-37, HRN-67**
  - like HRN-33, monitors voltage in range AC 24 - 150 V
  - it is possible to monitor level of overvoltage and undervoltage independently.
- Voltage Umin adjusted as % of Umax.
- 3-state indication - LEDs indicating normal state and 2 fault states.

## HRN-3x, HRN-6x | Voltage monitoring relays in 1P - AC/DC

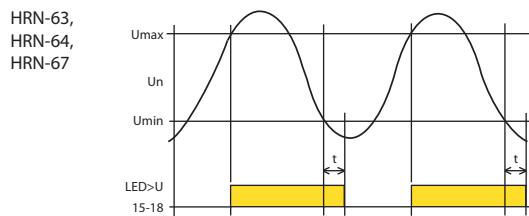

### Function HRN-33, 34, 35, 37 (band voltage relay)

Monitoring relay series HRN-3x monitors level of voltage in single-phase circuits. Monitored voltage serves also as supply voltage. It is possible to set two independent (all occurrences) levels of voltage, when exceeded the output is activated. HRN-33 and HRN-34 - in normal state the output relay is permanently switched. It switches off when there is a limit settings. This combination of linkage of the output relay is advantageous when the full failure of supply (monitored) voltage is considered to be a faulty state in the same way as a decrease of voltage within the set level. Output relay is in both situations always switched off.

Differently HRN-35 version uses independent relay for each level, in normal state it is switched off. If the upper level is exceeded (for example overvoltage) 1 relay switches on, if the bottom level (e.g. undervoltage) is exceeded 2 relay switches. It is thus possible to see the particular faulty state. To eliminate short peaks in the main the time delay, which is possible to be set in range 0 - 10 s, is used. It functions when changing from normal to faulty state and prevents unavailing pulsation of the output relay caused by parasitic peaks. Time delay doesn't apply when changing from faulty to normal state, but hysteresis (1 - 6 % depends on the voltage setting) apply. Thanks to changeover contacts it is possible to get other configurations and functions according to actual requirements of the application.

### Function HRN-63, 64, 67 (over/under voltage relay)

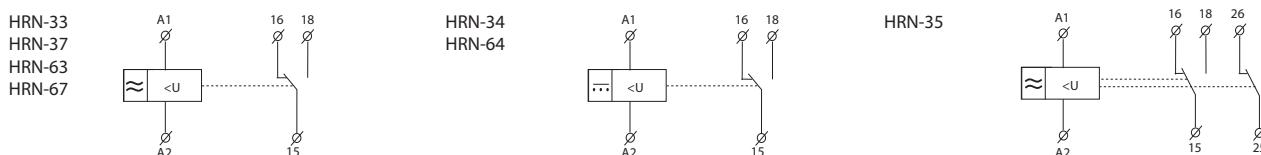

Legend:  
 Umax - upper adjustable level of voltage  
 Un - measured voltage  
 Umin - bottom adjustable level of voltage  
 15-18 - switching contact of output relay No.1  
 25-28 - switching contact of output relay No.2

LED  $\geq U_n$  - green indicator light  
 LED  $U \geq$  - red indicator light  
 LED  $U >$  - red indicator light

Monitoring relay line HRN-6x serves to monitor levels of voltage in single-phase or DC circuits. Monitored voltage is in the same time also supply voltage. It is possible to set two independent levels of voltage. When  $U_{max}$  is exceeded, output is activated. In case voltage level falls below  $U_{min}$ , output is deactivated. This combination is advantageous when full absence of supply voltage is understood as faulty state, as well as voltage drop within the set level. To eliminate short voltage peaks in the main there is time delay which can be set in a range of 0 - 10 sec. Such delay applies in case of going from overvoltage to undervoltage.

In case of returning from undervoltage to overvoltage this delay doesn't apply. Thanks to changeover output contacts it is possible to reach various configurations and functions according to requirements or an application.

Standards:			

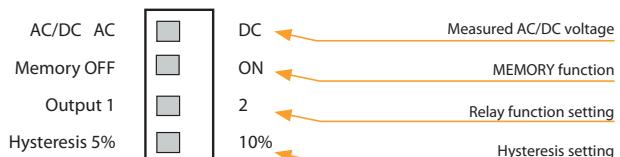

\* Only one of the inputs can be connected.

- Relay designed for monitoring DC and AC voltage in three ranges.
- The relay controls the size of the voltage in two independent levels (Umin, Umax).
- Setting the monitored level Umax (in % of range).
- Setting the monitored level Umin (in % of the set upper limit - for HRN-42 - function WINDOW), (in % of the set upper limit - for HRN-41 - function HYSTERESIS).
- Function of second relay (independently/in parallel).
- Adjustable delay for eliminating short-term outages and surges for every level independently.
- Galvanically separated power supply from monitoring inputs.
- Output contact for each monitored voltage level.

## HRN-41, HRN-42 | Voltage monitoring relays in 1P - AC/DC

## Function

- If the value of the monitored voltage is in the zone between the set upper and lower levels, the status OK occurs - both relays are closed and the yellow LED illuminates. If the value of the monitored voltage is outside the set limits ( $> U_{max}$  or  $< U_{min}$ ), an error state occurs.
- When moving to an error state  $U > U_{max}$ , it times the delay  $t_1$  and a red LED  $> U$  simultaneously flashes. After the  $t_1$  time elapses, the red LED  $> U$  illuminates and the relevant relay opens.
- When moving to an error state  $U < U_{min}$ , it times the delay  $t_2$  and a red LED  $< U$  simultaneously flashes. After the time  $t_2$  elapses, the red LED  $< U$  illuminates and the relevant relay opens.
- When moving from the error status to the OK status, the relevant red LED immediately goes out, and the corresponding relay closes.
