AC CURRENT

TECHNICAL SPECIFICATION

INPUT

Rated value In	1A or 5A from CT 0.2 to 10 Amp direct connected
Frequency	50 /60 /400 Hz
Burden	<0.5 VA per phase
Overload	2 x In continuous 10 x In for 3 seconds

SETPOINT

Range Over	Adjustable 40% to 120% In
Range Under	Adjustable 0% to 80% In
Repeatability	Better than 0.5% of full span
Differential	Fixed 5%
Time Delay	Adjustable 200ms to 10 seconds

AUXILIARY

AC Voltage	115/230/400V ($\pm 25\%$ /45-65 Hz / <2 VA)
DC Voltage	24 volt ($\pm 20\%$ /galvanically isolated) <3 watt

SELECTION GUIDE

M200-A1U	Single phase under current
M200-A1O	Single phase over current
M200-A1C	Single Phase combined current
M200-A3U	3 Phase under current
M200-A3O	3 Phase over current

TYPICAL APPLICATIONS

The M200 AC current relays provide current monitoring and protection in both single and 3 phase systems. Used in applications such as motor protection, load detection and generator control.

Under over and combined under/over units are available.

The relay operates when the adjustable trip point is reached. An externally adjustable time delay is provided to prevent nuisance tripping.

As is common with all the M200 relays, on over units the relay energises when the input signal exceeds the trip point. On under units the relay de-energises when the input signal goes below the trip point.

A red LED indicates the state of the relay, whilst a green LED indicates the condition of the power supply.

WEIGHT & CASE SIZE

Single units	Approx. 0.4kg. 55mm case
Combined units	Approx. 0.6kg. 100mm case

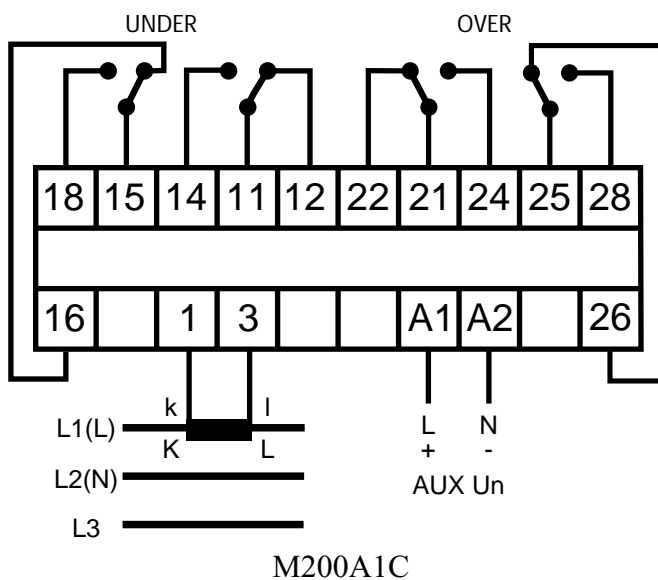

ORDERING INFORMATION

Product Code	Input	Freq.	Aux.	Options
M200-A30	5A	50Hz	230V	

OPTIONS

1. Adjustable time delay max 30 seconds
2. AC Auxiliary in the range 57.7 to 480 volts
3. Calibration at nominal Hz 35 450Hz
4. Calibration at temperature other than 23° C

AC CURRENT CONNECTION DIAGRAMS

AC VOLTAGE

TECHNICAL SPECIFICATION

INPUT

Rated value U_n	Single phase 57.8 <500 V Three phase 100 <500 V
Frequency	50/60/400 Hz
Burden	<2.5 VA per phase single units <3 VA per phase combined units
Overload	1.5x U_n continuous 2 x U_n for 3 seconds

SETPOINT

Range under	Adjustable 75% to 100% U_n
Range over	Adjustable 100% to 125% U_n
Repeatability	Better than 0.5% of full span
Differential	Adjustable 1 to 15%
Operating time	Typically 200ms

AUXILIARY

All units self powered.

WEIGHT & CASE SIZE

Single units	Approx. 0.4kg. 55mm case
Combined units	Approx. 0.6kg. 100 mm case

ORDERING INFORMATION

Product Code	Input	Freq	Options
M200-V34U/D	230V	50Hz	5 sec t/d

OPTIONS

1. On all of the above units, except the combined, an internally set time delay is available for any value between 1 & 10 seconds. To order use the above codes adding a D at the end of the code, e.g. M200-V34U/D 5 seconds (state the fixed delay period).

2. To prevent nuisance tripping when there is a slight variation in the voltage supply the following option is available. The external differential is replaced on the following products with an externally adjustable time delay. On these units the time delay is adjustable from 200ms to 10 seconds, and the differential is fixed at 1%.

M200- V1X	Single phase under voltage
M200- V1Y	Single phase over voltage
M200- V1W	Single phase combined voltage
M200- V33X	3 phase 3 wire under voltage
M200- V33Y	3 phase 3 wire over voltage
M200- V33W	3 phase 3 wire combined voltage
M200- V34X	3 phase 4 wire under voltage
M200- V34Y	3 phase 4 wire over voltage
M200- V34W	3 phase 4 wire combined voltage

3. Calibration at temperatures other than 23° C

SELECTION GUIDE

M200-V1U	Single phase under voltage
M200-V1O	Single phase over voltage
M200-V1C	Single phase combined voltage
M200-V33U	3 phase 3 wire under voltage
M200-V33O	3 phase 3 wire over voltage
M200-V33C	3 phase 3 wire combined
M200-V34U	3 phase 4 wire under voltage
M200-V34O	3 phase 4 wire over voltage
M200-V34C	3 phase 4 wire combined voltage

TYPICAL APPLICATIONS

The M200 AC voltage relay provides voltage monitoring and protection in both single and 3 phase systems. Used in applications such as mains failure, regulation of power supplies and to protect voltage sensitive equipment. Under, over and combined under/over units are available. The relay operates when the externally adjustable trip point is reached. An external differential control is provided with adjustment 1-15%. The differential ensures that the parameter being measured returns to % set above or below (depending on whether it is under or over unit) the trip point before the relay returns to its original state. As is common with all the M200 relays; on over units the relay energises when the input signal exceeds the trip point. On under units the relay de-energises when the input signal goes below the trip point. A red LED indicates the state of the relay, whilst a green LED indicates the condition of the power supply.

FREQUENCY

SELECTION GUIDE

M200-F1U	Single or 3 phase under frequency
M200-F1O	Single or 3 phase over frequency
M200-F1C	Single or 3 phase combined frequency

TYPICAL APPLICATIONS

The M200 series frequency relays are designed to monitor the frequency of a system and if the frequency deviates outside the adjustable pre-set limits, the relay will operate.

Typically used in protecting generators against over or under speed, this is achieved as speed is proportional to frequency. Other uses such as monitoring mains power supplies, computer supplies etc.

The user is provided with adjustment of both the trip point of frequency being monitored and the differential. As is common with all the M200 relays; on over units the relay energises when the input signal exceeds the trip point. On under units the relay de-energises when the input signal goes below the trip point.

A red LED indicates the state of the relay, whilst a green LED indicates the condition of the power supply. The frequency relays monitor their own power supply so no auxiliary power is necessary.

TECHNICAL SPECIFICATION

INPUT

Rated value U_n	57.8<500V+ 25%

SETPOINT

Range	2% to 20% reverse current
Repeatability	Better than 0.5% of full span
Time delay	Adjustable 200ms to 20 sec
Hysteresis	1%

AUXILIARY

All units self powered

WEIGHT & CASE SIZE Approx. 0.6kg. 100mm case

SELECTION GUIDE

M200-RP1	Single phase or 3 phase 4 wire
M200-RP3	3 phase 3 wire

TYPICAL APPLICATIONS

The M200 reverse power relay is used to monitor the direction of power from AC generators. If the current in the system being monitored is reversed, to a value greater than the customer adjustable pre-set limit, the relay will energise.

The adjustable trip point is 2 to 20% of input current. An adjustable time delay of 0 to 20 seconds is provided. Correct setting of the trip point and time delay will ensure protection against motoring in the event of a generator failure and prevent tripping due to transients encountered during synchronising.

A red LED indicates the state of the relay and a green LED indicates the condition of the power supply

ORDERING INFORMATION

Product Code	I_n	U_n	Input Freq.
M200-RP3	1 Amp	400V	50Hz

OPTIONS

1. Adjustable time delay max 30 seconds
2. AC auxiliary in range 57.7 to 480 volts
3. Calibration at nominal Hz 35 450Hz
4. Calibration at temperature other than 23 C

SYNCHRONISING CHECK

TECHNICAL SPECIFICATION

INPUT

Rated value U_n	$57.8 < 500V \pm 25\%$
Frequency	50 /60/400 Hz
Burden	$< 4VA$ terminals marked GEN $< 2VA$ terminals marked BUS
Overload	$1.5x U_n$ continuous $10x U_n$ for 3 seconds

SETPOINT

Range	Adjustable 10% to 30% of nominal system voltage (6-20 electrical degrees)
Repeatability	Better than 0.5% of full span
Differential	Fixed at 5%
Operating time	Typically 500ms

AUXILIARY

Both units self powered.

WEIGHT & CASE SIZE Approx. 0.6kg. 100mm case

SELECTION GUIDE

M200-PLL 1 generator 1 bus or 2 generators

M200-PLD 1 generator 1 bus with dead bus facility

Both units can be used on Single or 3 phase systems.

ORDERING INFORMATION

Product Code	System Voltage	Freq.	Options
M200-PLD	400V	50Hz	Cal at 35° C

TYPICAL APPLICATIONS

The M200-PLL & PLD are synchronising check relays, also known as paralleling relays. They are used to ensure at two AC supplies are synchronised. For a system to be synchronised, frequency, phase angle and voltage have to within pre-set limits.

The M200-PLL can monitor either mains bus bar and incoming generator or two generators.

The PLL has customer adjustment of the differential voltage between 10 to 30%. This voltage corresponds to 6 to 20 electrical degrees. The unit compares the input voltage and phase relationship of the bus bar to that of the generator when the signal is within the pre-set limits, the relay energises.

The M200-PLD operates as the M200-PLL but has the additional feature of the dead bus facility. This enables the relay to energise with a generator supply only, which is a common requirement when mains failure occurs.

OPTION

1. Calibration at temperature other than 23° C

CONNECTION DIAGRAM

PHASE SEQUENCE

SELECTION GUIDE

M200-PS1 3 phase 3 or 4 wire

TYPICAL APPLICATIONS

The M200-PS1 provides phase and sequence phase failure protection. Used to ensure the sequence is correct when connecting 3 phase loads.

With an incorrect phase sequence the relay will de-energise preventing the starting of incorrectly connected machinery.

The relay will also trip if there is a phase loss and can therefore be used as a phase failure relay.

Note if regenerated voltage is present in the open phase the M200-PB1 or M200-PB2 should be used.

The red LED "ON" indicates phase sequence incorrect and relay is de-energised.

The green LED "ON" indicates phase sequence correct and relay is energised.

TECHNICAL SPECIFICATION

INPUT

Rated value U_n	$57.8 < 500V \pm 25\%$

PHASE BALANCE

SELECTION GUIDE

- M200-PB1** Detects phase loss & phase unbalance
M200-PB2 Detects phase loss, phase unbalance & symmetrical under-voltage

TYPICAL APPLICATIONS

The M200-PB1 can detect the following conditions in phase 3 or 4 wire systems. Phase Unbalance, Phase Loss, Phase Reversal and Phase Sequence.

The phase balance relays are used to detect phase loss and unbalance in systems using motors, generators, heater elements, transformers etc. A Phase unbalance as small as 10% in a 3 phase motor can cause the temperature in the motor winding to increase by more than 120%, correct setting of the PB1/PB2 will ensure this does not occur. Protection against open phase regenerated voltage, created if a single phase should fail is also provided.

Customer adjustment of unbalanced voltage between 5 to 15% is provided along with time delay adjustment of 200ms to 10 seconds.

If the system being monitored is healthy, the relay is energised, and the red LED will be illuminated. If a phase unbalance greater than the pre-set level or phase loss / reversal occurs, the relay de-energises after the time delay period. The M200-PB2 provides all the protection features of the PB1 with the additional benefit of having symmetrical under voltage protection. This means that if all the phase voltages remain balanced but drop below a pre-set value, the relay will de-energise. The under voltage is internally set. For standard units it is set at 85% below the nominal voltage, but this value can optionally be between 70% and 90%

TECHNICAL SPECIFICATION

INPUT

Rated value U_n	$57.8 < 500V \pm 25\%$
Frequency	50/60/400 Hz
Burden	$< 2VA$
Overload	$1.5x U_n$ $2x U_n$

SETPOINT

Range	Adjustment 5 to 15% unbalanced voltage
Repeatability	Better than 0.5% of full span
Under-voltage	PB2 only, pre-set 85% of nominal voltage (optional 90% to 70%)

Time delay	Adjustable 200 ms to 10 sec
------------	-----------------------------

AUXILIARY

Self powered

WEIGHT & CASE SIZE Approx. 0.4kg, 55mm case

ORDERING INFORMATION

Product Code	U_n	Input Freq.	Option
M200-PB2	415 v	50Hz	Under Volts at 70%

OPTIONS

1. Adjustable time delay max 30 seconds
2. Internal under voltage set between 90% to 70%
3. Calibration at nominal Hz 35....450Hz
4. Calibration at temperature other than 23° C

CONNECTION DIAGRAM

SPEED SENSING

TYPICAL APPLICATIONS

The M200-ST3 is most commonly used to detect the speed of engines used in generating sets. The pick-up, situated close to the flywheel, produces a high frequency pulse train directly proportional to the number of teeth passing it. The frequency is converted by the ST3 into a mA signal directly proportional to the rotational speed of the flywheel.

The relay provides the user with the following adjustments, which allows the control of start up and normal running and protects against over and under speeds of the generator.

Adjustment of crank speed 10 to 50%

Adjustment of under speed 50 to 100%

Adjustment of over speed 100 to 133 %

A mA output signal proportional to input frequency.

Typical start-up as follows -

When the speed of the motor reaches the crank's set-point, the crank relay energises, disengaging the crank starter. When the under speed set-point is reached, the under speed relay is energised and the motor is now in the normal running condition with all relays energised. Should an under or over speed condition occur the appropriate relay is de-energised. Two other safety features are incorporated; if the pick-up sensor input lead breaks the over speed relay will de-energise also the crank relay will only de-energise when the input frequency goes below 20% of the set-point. The mA output signal can be fed to digital or analogue meters scaled in speed, or to provide a control signal to a PLC etc.

TECHNICAL SPECIFICATION

INPUT

Pulses 5V-75V peak to peak
Frequency 1000-10000 Hz (speed of rotation RPM x number of teeth / 60)

Open circuit protection Over-speed relay de-energised

OUTPUT

Rated value 0-1mA = 133% of nominal speed
Load resistance < 10k Ohm
Calibration Value 0.75mA = 100% of nominal speed

SETPOINT

Range Crank 10 to 50%
Under 50 to 100%
Over 100 to 130%

Repeatability Better than 0.5% of full span
Hysteresis 2% (under, over) crank resets at 20% setting

Operating time Typically 200 ms

AUXILIARY

DC Voltage 24 VDC \pm 20%

WEIGHT & CASE SIZE Approx. 0.5kg. 100mm case

NOTE: The 3 relays in this product are single pole changeover. The remainder of this specification is as per general specification on page 3.

SELECTION GUIDE

M200-ST3 Speed sensing relay

ORDERING INFORMATION

Product Code M200-ST3
Normal running speed 1800 rpm
Number of teeth on flywheel 50
Magnetic pick up output voltage 10 volt pk-pk

OPTIONS

1. Calibration at temperature other than 23° C
2. Set-points are factory set. Specify frequency of crank; under speed and over speed settings required.

CONNECTION DIAGRAM

DC TRANSDUCER TRIP

SELECTION GUIDE

M200-TAU	DC volts or mA under trip
M200-TAO	DC volts or mA over trip
M200-TAC	DC volts or mA combined trip

TYPICAL APPLICATIONS

The M200 DC transducer trips have endless applications. As the name implies they are designed to accept inputs from transducers and transmitters, and provide a relay operation when the transducer signal deviates outside a pre-set limit.

Any of the M100 series transducers can be used with the transducer trip. A typical application is to control power using a M100-WA5 with a 4-20mA signal fed to a M200-TAO. For example the output goes above a pre-set limit of 80%, the TAO relay will close, setting off an alarm or shutting down a process.

Either DC voltage or DC current inputs can be used. As is common with all the M200 relays, on over units the relay energises when the input signal exceeds the trip point and on under units the relay de-energises when the input signal goes below the trip point.

A red LED indicates the state of the relay, whilst a green LED indicates the condition of the power supply.

TECHNICAL SPECIFICATION

INPUT

Rated value In	0<20mA or 4- 20mA
Voltage drop	1 volt
Rated value Un	1<50 volt or 1-5 volt
Impedance	10k Ohm / Volt

THERMISTOR TRIP

SELECTION GUIDE

M200- TTA	Automatic reset
M200-TTM	Manual reset

TYPICAL APPLICATIONS

The M200 thermistor trip accepts positive temperature coefficient thermistor inputs. Typically used to monitor temperature in motor windings.

When the thermistor is below its predetermined temperature the resistance is low and the M200-TTA / TTM relay is energised. A green LED indicates the safe condition. When the temperature exceeds the predetermined temperature, the resistance of the thermistor rapidly increases, this increase in temperature is detected by M200-TTA/TTM and the relay is de-energised.

The M200-TTM is manually reset. Once the relay has de-energised it will stay de-energised regardless of the temperature being monitored. The relay can only be reset via the reset push button on the front of the unit. The M200-TTA automatically resets once the temperature has dropped below the trip point

A yellow LED is provided to indicate the condition of the power supply.

TECHNICAL SPECIFICATION

INPUT

Positive temperature coefficient thermistors <1500 Ohms max at nominal temperature. Sensors can be connected in series but 1500 ohm must not be exceeded.

Trip point 2500-3500 Ohms
Reset point 1500-2300 Ohms

Total resistance of sensor loop 1500 Ohms max at nominal temperature

Differential Fixed 5%
Repeatability Better than 5% of range

RESET

M200-TTA Automatic

MILLIVOLT TRIP

SELECTION GUIDE

M200-MVU	mV under trip
M200-MVO	mV over trip
M200-MVC	mV combined trip

TYPICAL APPLICATIONS

The mV trip relays will accept DC millivolt signals from shunts, sensors and transducers.

A common application is to protect equipment from over current in a DC charging system. For example using a 400A to 75mV shunt. The 75mV signal is fed to the M200-MVO if the customer wishes to ensure the current does not exceed 300 amps then the MVO trip would be set at 75 % (56.25mv). If the current goes above 300 Amps the relay would energise. As is common with all the M200 relays, on over units the relay energises when the input signal exceeds the trip point and on under units the relay de-energises when the input signal goes below the trip point.

A red LED indicates the state of the relay, whilst a green LED indicates the condition of the power supply.

TECHNICAL SPECIFICATION

INPUT

Rated value mV dc	10-999.9mV dc
Input Impedance	50k Ohm
Source impedance	100 ohms max
Overload	10 x Input continuous

SETPOINT

Range Over	Adjustable 40% to 120%
Range Under	Adjustable 0% to 80%
Repeatability	Better than 0.5% of full span
Time delay	Adjustable 200 ms to 10 seconds
Differential	Fixed 5%

AUXILIARY

AC Voltage	115/230/400V ± 25% / 45-65 Hz / <2VA
DC Voltage	24V (± 20% galvanically isolated) < 3 W

WEIGHT & CASE SIZE

Single units	Approx. 0.4kg 55mm case
Combined units	Approx. 0.6kg 100mm case

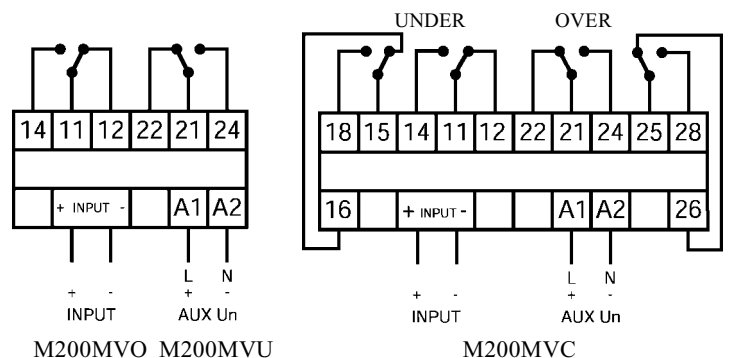

ORDERING INFORMATION

Product Code	Input	Aux	Freq	Options
M200-MVU	75mV	230V	50Hz	Cal 40°C

OPTIONS

- 1.Adjustable time delay max 30 seconds
- 2.AC auxiliary in the range 577 to 480 volt
- 3.Calibration at temperature other than 23° C

CONNECTION DIAGRAMS

DC VOLTAGE TRIP

TECHNICAL SPECIFICATION

INPUT

Rated value U_n	$1 < 150$ volt
Impedance	10k Ohm / Volt
Overload	1.5 x U_n continuous 2 x U_n for 3 seconds

SETPOINT

Range Over	Adjustable 40% to 120%
Range Under	Adjustable 0% to 80%
Repeatability	Better than 0.5% of full span
Differential	Fixed 5%

AUXILIARY

AC Voltage	115/230/400V $\pm 25\%$ / 45-65Hz / 2VA
DC Voltage	24 volt ($\pm 20\%$ / galvanically isolated) <3 watt

WEIGHT & CASE SIZE

Single units	Approx. 0.4kg, 55mm case size
Combined unit	Approx. 0.6kg, 100mm case size

SELECTION GUIDE

M200-TVU	DC volts under trip
M200-TVO	DC volts over trip
M200-TVC	DC volts combined trip

TYPICAL APPLICATIONS

The M200 DC voltage trips are commonly used for monitoring battery voltage conditions but can be used in any application where the dc voltage level is critical. The user is provided with an adjustable set-point of 0-80% on under units and 40-120% on over units. The differential is internally set at 5%; no time delay is provided.

As is common with all M200 relays, on over units the relay energises when the input signal exceeds the trip point and on under units the relay de-energises when the input signal goes below the trip point.

A red LED indicates the state of the relay whilst a green LED indicates the state of the power supply.

ORDERING INFORMATION

Product Code	Input V_n	Aux	Freq Options
M200-TVU	24V	110V	50Hz

OPTIONS

1. AC auxiliary in the range 57.7 to 480 volts
2. Calibration at nominal Hz 35...450Hz
3. Calibration at temperature other than 23° C

TEMPERATURE RELAY (THREE RTDS)

PRODUCTS COVERED

M200-RT3 3 Input RTD temperature trip

APPLICATION

The M200-RT3 monitors 3 individual RTDs (resistance temperature detectors) and provides LED indication as to which RTD is at the highest temperature, as well as a mA output signal that is proportional to the temperature of the highest RTD.

The mA output signal can be fed to an analogue or digital meter scaled in temperature or to a computer system.

The three relays are provided with customer adjustable set points, as the temperature rises each relay will energise when the set point is reached. Three LED's are provided to show the state of each relay, when the relay energises the red LED is illuminated. A green LED is provided to indicate the condition of the power supply.

Typical applications included monitoring of temperature in transformer windings and large 3 phase motor windings.

Typically a unit could be monitoring 3 inputs from a Pt 100 RTDs over the range of 0-200 °C, the first set point could be set at 80 °C and when this point is reached the relay could switch on a cooling fan. The second relay could be adjusted for 130 °C and when this temperature is reached the relay could set off an alarm. The third relay could be adjusted to 180 °C and when this temperature is reached the relay could shut down the complete system.

SPECIFICATION

INPUT

2 or 3 wire

Copper Cu 10 Ohm RTD Range 0-200 °C

Platinum Pt 100 Ohm RTD Range 0-200 °C

OUTPUT

Rated value

0-1mA input

Load resistance

Maximum 5k Ohms

RELAY SETPOINTS

Adjustment range

50% to 100% of input temperature range for all 3 set points.

Repeatability

Better than 0.5% of full span

Differential

Fixed 2% of range

RELAYS

Relay type

Single pole change over

PRODUCTS COVERED

M200-RT6

6 Input RTD temperature trip

APPLICATION

The M200-RT6 monitors 6 individual RTDs (resistance temperature detectors) and provides LED indication as to which RTD is at the highest temperature.

Each RTD has an associated LED which illuminates when the temperature exceeds the trip point.

A green LED is provided to indicate the condition of the power supply.

Typical applications included monitoring of temperature in transformer windings and large 3 phase motor windings.

Typically, a unit could be monitoring 6 inputs from a Pt 100 RTDs over the range of 0-200 °C, the set point could be set at 110 °C and when this point is reached the relay could switch on an alarm.
